

CERVICAL PILLOW

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

Byon is a special textile fiber with additives of natural origin capable of reflecting the infrared radiation from living and non-living organisms (heat effect). The Byon fiber flake, thanks to its thermally insulating property, exploits the beneficial body heat to re-emit FIR photons, modifies the energy field of the water and allows the re-energization of water molecules with quantum or photonic charges. The Byon FIR by XENIA Fiocco, manipulated according to one's needs and kept in contact with the interested part, can be an adjuvant in the attenuation of the sensation of pain due, for example, to inflammatory states - even chronic ones - swelling, contractures and traumas muscle. The thermoregulation brought about by the Byon Fiocco facilitates the recovery and reabsorption of edema and swelling. It also favors the improvement of peripheral microcirculation by assisting the processes of restoring correct tissue activity.

In all cases indicated, the use of Fiocco or other Byon garments does not exclude or replace what is medically prescribed.
