

WOMEN'S TOP

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

The use of this garment is recommended for the well-being of the trunk as it helps to improve the peripheral microcirculation of the affected area, relieving psycho-physical stress, the feeling of tiredness and fatigue. It contributes to a rapid recovery in athletes and in those who carry out jobs that involve heavy physical activity. It helps body thermoregulation and the elimination of excess fluids. It is recommended to use it during sporting activity. In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is medically prescribed.
