

SHAPING

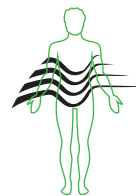

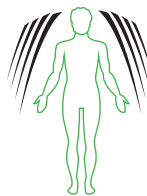

GIRDLE

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

The shaping girdle, in addition to being soft and thin, is comfortable and can be worn daily under clothing. Furthermore, it is air-conditioned thanks to the so-called "heat effect", i.e. the ability to insulate thermally. The girdle favors the reduction of cellulite blemishes through the micro-massaging, draining and slimming action it exerts in contact with the skin. Finally, it promotes the physiological synthesis of collagen and makes the skin more elastic and velvety. In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is medically prescribed.
