

UNDERGLOVES

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

Byon fiber undergloves are soft, thin and pleasant to wear. Thanks to the so-called "heat effect", these products are also air conditioning. Useful for covering the wrist-hand area, they promote the peripheral microcirculation of the affected area. They also offer relief to all those who always have cold hands or who are exposed to low temperatures for long periods, they assist treatments aimed at reducing pain in the joints (fingers and wrists) and the treatment of swelling in the pre- and post operative. In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is medically prescribed.
