

PANTACOLLANT

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

The use of this garment is recommended during physical activity and physical recovery as it helps to optimize the peripheral microcirculation of the thighs and legs. Leggings give relief from the feeling of tiredness in the lower limbs by promoting, if combined with physical activity, the elimination of lactic acid, toxins and excess liquids. In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is medically prescribed.
