

BLACK SHOES

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

The new Xenia shoe is made with seamless tubular 3D technology. The entire upper is produced with a circular knitting machine, in order to create the various areas in a single process. The use of the vibram sole gives an excellent grip to the shoe which is well suited to different situations, from a normal walk on slightly uneven ground to running. The midsole made of EVA material, makes every step extremely comfortable, thanks to the high capacity of cushioning. The inner layer and insole, in BYON yarn, optimize microcirculation thanks to the heat effect generated by the reflected far infrared. In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is medically prescribed.
