

Socks

WITH GRADUATED COMPRESSION

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, added with ceramic powders capable of reflecting far infrared, also known as FIR. Far infrared frequencies are biocompatible, i.e. compatible with all living organisms and induce a resonance effect with water called the "heat effect", thanks to which microcirculation is optimised.

We recommend using this product as an adjuvant support in treatments aimed at alleviate peripheral microcirculation disorders that cause swollen feet and tired and problems with excessive sweating.

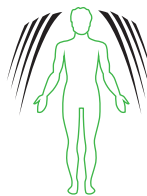

The medium compression of the sock improves circulation, provides support to the leg, giving a pleasant sense of well-being.

Elegant and very comfortable, it is suitable for those who need stimulation of venous circulation. (posture, lifestyle lacking in movement, working too sedentary or standing for long periods, heat).

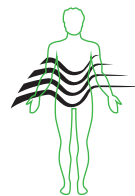

In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is prescribed medical level.
