

MAN

SPORT T-SHIRT

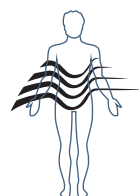

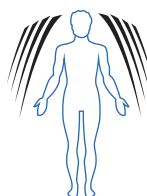

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

We recommend this product to those who need constant support in sport and in their free time. The special conformation of the fabric allows a light and continuous differentiated compression with a massaging effect. It favors the improvement of peripheral circulation by assisting the processes of maintaining correct joint functions.

In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is medically prescribed.
