

ANKLE BRACE

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

Designed to limit the joint movement of the ankle, it performs a balanced and effective supportive and containing action, indicated as an adjuvant in mild or moderate ankle sprain and in the reduction of edema. The special conformation of the fabric, even in the rest position, allows a light and continuous differentiated compression with a self-massaging effect. It also promotes an improvement in peripheral microcirculation, assisting the processes of restoring correct joint functions. In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is medically prescribed.
