

ELBOW BRACE

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

This elastic elbow pad develops a long-lasting and beneficial effect of muscle support thanks to the laterally positioned tension points and the use of 3d processes with a massaging action. The elbow support is indicated as an adjuvant in the treatment of painful states of the elbow, reduction of edema, movement difficulties, traumas or weakness caused by daily or sporting activities. The transpiration zones favor correct thermoregulation. In all the aforementioned cases, the use of xenia garments does not exclude or replace what is medically prescribed.
