

KNEE BRACE

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

The Xenia knee brace has a containment and support action on the knee joint. Indicated in prevention for all those who, in work and sport, subject their knees to heavy loads, it promotes physical recovery in case of sprain and dislocation. The tension points, positioned laterally, offer postural support and give greater support to the affected area. The transpiration zones favor correct thermoregulation. In all the aforementioned cases, the use of xenia garments does not exclude or replace what is medically prescribed.
