# LEGGINGS

## THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

The leggings can be used on a daily basis and are suitable for both sport and leisure. Thanks to the beneficial heat effect, they affect the peripheral microcirculation of the lower limbs and optimize blood flow by improving oxygen transport. The transpiration zones favor correct body thermoregulation. Its use is recommended as an adjuvant to relieve the sense of tiredness in the lower limbs. Finally, the laterally positioned tension points offer soft postural support, shape the hips and give greater support to the affected area, also giving a push-up effect. In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is medically prescribed.
