

KNOB

THE FIBER

Xenia garments and devices are made with technologically advanced fabrics and yarns, with the addition of ceramic powders capable of reflecting the far infrared, also called fir. The far infrared frequencies are biocompatible, i.e. Compatible with all living organisms and induce a resonance effect with the water known as the "heat effect", thanks to which microcirculation is optimised.

The Sustenium Knob is indicated for those who subject their wrist to high loads, promoting recovery from sprains and dislocations. The special conformation of the fabric allows a light and continuous differentiated compression with a massaging effect. It promotes an improvement in peripheral circulation, assisting the processes of restoring correct functions. The transpiration zones favor correct thermoregulation. In all the aforementioned cases, the use of Xenia garments does not exclude or replace what is medically prescribed.
